

Port Specific Safety Climate Tool

The Safety Climate Tool (SCT) is a structured survey designed to measure health and safety culture within an organisation. It provides insight into how employees perceive safety, helping organisations identify strengths, areas for improvement, and track progress over time.

The SCT forms part of PSS's wider approach to strengthening health and safety culture across the ports sector. Participation will enable organisations to gain insight into their own safety culture, benchmark against the wider sector, and contribute to a shared understanding of port sector performance.

Please note that, whilst every effort will be made to fulfil your requests, where limited sponsorship opportunities are available, they will be offered on a first come, first served basis.

Organisation information	
Company name	
Main contact details	
Number of admin licences required (One off fee: £199 + VAT)	
Number of employees (annual charge £4.99 + VAT each)	
Expected commencement date: (Due to the subscription process, new applications will be taken twice per year).
